

AUGMENTED GLEN WATER WIND FARM TOUR FULL DISCLAIMER

This virtual reality (VR) augmented environment and associated web-based solution has been prepared to assist understanding of the proposed wind farm and are provided as **supplementary, illustrative material only**. They should not be relied upon in isolation for the assessment of landscape and visual effects.

The visualisations have been produced in accordance with principles of guidance published by the **Landscape Institute** and **NatureScot**, applying a **proportionate level of accuracy** appropriate to the landscape context and viewing distances involved.

Survey-verified technology has been combined with accurate 3D modelling to create survey-verified photomontages, with camera locations recorded using appropriate surveying techniques where required.

The VR headset and web-based versions are intended to provide an **indicative impression only**. Due to factors such as display resolution, optics, user movement, and variable fields of views which are greater than 90-degrees, these formats do not provide a fixed or verifiable view and should not be interpreted as precise representations of visual impact.

To assess how the turbines would appear in the landscape, reference should be made to the accompanying **wireline views**, submitted in support of the planning application.
